

AVLifesavers Product Fact Sheet

Product: Mini XLR Mixer
Price: \$95 (as of 3-14-19)

Uses:

- * Turn 1 mic input into 3 in an emergency
- * Use where others mixers won't fit

Features:

- * Passive design needs no power (there is a 6db drop in level however)
- * Works on anything with an XLR input
- * Brand name Neutrik XLR & Bourns Pots
- * Mic or line level signals (you get out what you put in)
- * Weighs 10 oz

FAQ:

Q: What about Phantom Power?

A: It passes through slightly reduced phantom power. The vast majority of condenser mics don't need the full 48 volts unless it's specifically designated as P48. Since the mixer itself doesn't require power, it can't provide it in & of itself.

Q: How does it work without power?

A: It's based on the same design as an XLR Audio Pad, except it lets you Continuously Vary the attenuation of the pad, and in doing so the level of the signal.

Q: Must the Signal be XLR Balanced?

A: YES! All sources must have balanced XLR outs, such as from a mic or direct box. There is simply no way to use a cable to convert from 2 conductor 1/4" to 3 pin XLR on the other end & have it magically become balanced. This is what a direct box does.

Q: How do I control the overall level of the mix?

A: Use the level control on what you're plugging it into (mixer, combo amp, powered speaker, etc.) Control the overall equalization with the EQ on that device as well.
